

Soil dosing unit

brandnew

Specifications

Type	Big Bale DB-40
Brand	Logitec
Code	25492
Watering boom	Optionally available
Wooler	Optional
Maximum load	1400 kg
Max height big bales	2600 mm
Belt width	1200 mm
Weight	1200 kg

25492-V23040501-EN

Hortimat - Vlotlaan 192, 2681
TV Monster, The Netherlands

T +31(0)174 38 71 10 E info@hortimat.com
W www.hortimat.nl

Length	3230 mm
Width	1550 mm
Height	2150 mm
Power supply	400 V, 3 phases, zero + earth, 50 Hz

How it works:

The Big-Bale is placed in the bunker by means of a pallet truck or forklift. This Big-Bale is tilted in the bunker by means of a hydraulic tilting mechanism. At the bottom of the bunker, a chain with carriers moves towards the discharge opening side. This moving chain makes the substrate to its original volume. The substrate will be stirred up again by the wooler at the end of the bunker. The substrate gets transported in a dosed manner through the outflow opening.

General information:

A soil dosing unit is the best way for processing big bales and returns the original volume of the substrate as it was before pressing. This without affecting the structure and volume of the substrate.

Hortimat customizing work

Hortimat can design the offered machine to exact the customer requirements. Optionally we constructively adjust the machine or we install new operating systems. We also deliver tailor made solutions in the form of logistic conveyor belt systems and we think along with the customer for custom made solutions.

Why Hortimat

- + Adapting / modifying of used machines to desired specifications of the customer
- + Applying of new 2023 operating systems on used machines
- + New Hortimat range of products
- + Service and warranty by own technical specialists
- + Solid revision; guarantees a long lifetime
- + Individual advice about logistics matters, such as: grading machines, processing areas
